

# Tips for Healthy Bones

## Exposure to sunlight

Vitamin D is needed by the body to help it absorb calcium.

## Regular exercise

Exercise is essential for achieving peak bone mass, and maintenance of bone mass.

## Eat calcium-rich foods

This includes green vegetables (broccoli, bok choy etc), almonds, fish with bones, sesame seeds, carob, tahini, cauliflower and figs.

## Cut down on salt

High dietary salt intake may cause bone loss. Switch to sea salt instead of iodised salt.

## Watch what you drink

Soft drinks, alcohol, tea & coffee reduce the amount of calcium your body absorbs.
